

**EQUI VET SERWIS**  
**DR MACIEJ PRZEWOŹNY**

**Prepurchase Examination Worksheet**

Is the horse insured:  yes  no

**Horse identification: BILLIE BOY J&J Z, ID 981100004531711**

Intended use of the horse: jumping    Age: 4, born on 20.06.2018    Breed: BWP    Color: grey

Sex: gelding    Vaccination:  tetanus  influenza  EHV 1,4

Medication in the last 4 weeks?  no  yes:

Previous lameness?  no  yes

Previous medical problems?  no  yes

Previous surgeries?  no  yes

Stereotypies:  no  yes :  cribbing  waving  headshaking  windsucking  box walking

**The above information is declared by the seller and is not subject to verification.**

**General examination:**

Conformation and stance:  normal  abnormal

Nutritional status:  normal  abnormal

Skin and hair:  normal  abnormal

Pulse at rest:  normal  abnormal

Mucous membranes:  normal  abnormal

Lymph nodes:  normal  abnormal

Respiration at rest:  normal  abnormal

Respiration after work:  normal  abnormal

Type of respiration:  normal  abnormal

Spontaneous cough: yes  no     Cough reflex yes  no     endoscopy:  no  yes

Cardiovascular system:  normal  abnormal

Eyes (including ophthalmoscopic examination):  normal  abnormal

Digestive system:  normal  abnormal

Urogenital system:  normal  abnormal

Nervous system:  normal  abnormal

**Locomotor system:**

Inspection:  normal  abnormal

Palpation:  normal  abnormal

Neck and withers :  normal  abnormal

Back :  normal  abnormal

Croup:  normal  abnormal

Left fore leg  normal  abnormal

Right fore leg  normal  abnormal

Left hind leg  normal  abnormal

Right hind leg  normal  abnormal

Horn quality  normal  abnormal

Heels and frog  normal  abnormal  
Hoof tester:  normal  abnormal  
Hoof size and shape: **equal** / unequal  
Shoes  no  yes, what kind?  all four legs  front feet

### Locomotion

walking on hard ground in a straight line:  normal  abnormal  
walking on hard ground in a small left circle:  normal  abnormal  
walking on hard ground in a small right circle:  normal  abnormal  
trotting on hard ground in a straight line:  normal  abnormal  
trotting on hard ground in a small left circle:  normal  abnormal  
trotting on hard ground in a small right circle:  normal  abnormal  
trotting on soft ground in a left circle:  normal  abnormal  
trotting on soft ground in a right circle:  normal  abnormal  
cantering on soft ground in a left circle:  normal  abnormal  
cantering on soft ground in a right circle:  normal  abnormal

Flexion test: LF **not sensitive** / sensitive - (negative)  
RF **not sensitive** / sensitive - (negative)  
LH **not sensitive** / sensitive - (negative)  
RH **not sensitive** / sensitive - (negative)

Ataxia:  no  yes

Fixing of patella: LH **not possible** / possible RH **not possible** / possible

Blood collection :  no  yes stored frozen 3 months

Place, date and time of examination: Tarnowo Podgórne 15.09.2021 4.00.00 PM-5:00 PM

Examining veterinarian: Bartosz Jankowiak

The inspecting Veterinary Surgeon can not be held responsible for a latent defect which could not be diagnosed in a carefully conducted examination.

A pre-purchase examination of a horse represents a veterinary assessment of the health as on the day of the examination. The examination is based on the horse's level of training and fitness at the time, the tack and equipment used, the way of training and the present rider/trainer.

Prior to the examination, it remains the responsibility of the purchaser to have assessed the horse in the stable, during saddling and warming in and to have ridden the horse and found it rideable and at a level of training compatible with the age and reported training levels of the horse. It also remains the responsibility of the purchaser to examine possible competition results as well as previous medical history for the horse.

The examination is not capable of predicting the future level of performance in the horse or the overall capacity of the horse. The pre-purchase examination is not compatible with or similar to a detailed or specialist investigation used in the investigation of diseases or injuries.

Any possible radiographic examination remains a survey assessment of the bones which can be evaluated on the images. The radiographic examination is set out as a standard protocol and is not able to predict the future performance levels, future soundness or resale value of the horse. The significance of possible radiographic observations will in many cases depend on the result of the clinical pre-purchase examination.

Any possible claim for damages from the purchaser against the veterinary surgeon as the result of the pre-purchase examination is in all cases subsidiary to purchaser's demand for proportional reduction/ compensation from the vendor. For this reason, the veterinary surgeon can only be made liable for compensation towards the purchaser as the result of the pre-purchase examination if and when the purchaser's demand for proportional reduction/compensation from the vendor has not materialised. An out-of-date reclamation for compensation from the purchaser towards the vendor likewise excludes the purchaser from claiming damages from the veterinary surgeon.

Any possible claim for damages from the vendor against the veterinary surgeon as the result of the pre-purchase examination is in all cases restricted to any proven loss as the result of additional expenses incurred by the vendor as the result of the pre-purchase examination, whereas the vendor will be unable to claim damages relating to any loss of value of the horse (being the difference in the value of the horse before and after the detection of those abnormalities which might give rise to a claim for damages against the veterinary surgeon)

The examination is by instruction of the purchaser of the horse who agrees that, irrespective of the outcome of the examination, he/she is required to pay the performing veterinary surgeon for the examination of the horse. Payment is due immediately following of the examination, except if other arrangements have been agreed in advance.
