RADIOGRAPHIC SCREENING

Cheval : MAGIC

Puce : 528210004675643

Date : 24.05.2022

Pied AG (face/profil) :

Several dimples on the palmar aspect of the navicular bone. They are not confluent and without sclerosis.
Navicular bone slightly asymmetrical.
Beginning ossification of the ungular cartilages.
Slight modification of processus extensorius.

Pied AD (face/profil) :

Slight remodeling of processus extensorius and on the distal part of P2.
A few dimples (but less than AD) on the palmar aspect of the navicular bone, without sclerosis and non confluent.
Navicular bone slightly asymmetrical.

Boulet AG profil : no anomaly on this shot

Boulet AD profil : no anomaly on this shot

Boulet PG profil : no anomaly on this shot

Boulet PD profil : no anomaly on this shot

Jarret G DL : slight thinning of the tarso-metatarsal joint, but without sclerosis.

Jarret D DL : slight thinning of the tarso-metatarsal joint, but without sclerosis.

Grasset G profil : no anomaly on this shot

Grasset D profil : no anomaly on this shot

Conclusion :

Satisfactory radiographic screening overall with several modification on both front feet.

Dr CLAUDE Camille
