Prepurchase examination

Examination date: August 25th, 2021.

Horse		Name: Kafu Sexe: Gelding Date of Birth: April 22 nd , 2015.		Studbook: KWPN Microchip number: 528210004344350	
Anamnesis				‘Kafu’, a six-year-old dressage gelding was presented to us on August 25 th , 2021 in light of a prepurchase examination. The goal of this examination was to assess the risks associated with a career as a dressage horse. The horse is to participate in an auction in September.	
Inspection/palpation				The horse was in excellent bodily condition with good musculature. He was shod in front and barefoot behind. He showed signs of light shivering in the right hind leg. He reacted normally to standard environmental stimuli.	
Heart/Lung Auscultation					
		Before Lunging:		No abnormalities were heard. Cardiac rhythm was normal.	
		After Lunging:		No abnormalities were heard, recuperation was within normal time.	
Ophthalmoscopic examination				All inner eye structures appeared normal during the examination with the direct ophthalmoscope. All eye reflexes were present and normal.	
Dynamic examination					
Walk	Straight line:	No abnormalities were visible.	Flexion tests		
Trot	Straight line:	No abnormalities were visible.	LF fetlock:	Negative.	
Hard Ground	Trot Left:	No abnormalities were visible.	RF fetlock:	Negative.	
	Trot Right:	No abnormalities were visible.	LH fetlock/hock:	Negative.	
Soft Ground	Trot left:	No abnormalities were visible.	RH fetlock/hock:	Negative. Slight shivering was noticed while picking up the leg, flexion was possible without much trouble.	
	Trot Right:	No abnormalities were visible.			
	Canter left:	No abnormalities were visible.			
	Canter right:	No abnormalities were visible.			

Conclusion:	<p>Based on the findings of the clinical examination of 'Kafu on the 25th of August 2021 we can conclude that these clinical findings pose a normal risk concerning a sports-career as a dressage horse.</p> <p>The examinations carried out on this day reflect only on the horse's health at that time and the risks that may be detected in view of its use. The horse's future status of health and physical integrity will also depend on its lifestyle and the conditions in which it is used.</p>
