

CERTIFICATE OF VETERINARY EXAMINATION OF A HORSE ON BEHALF OF A PROSPECTIVE PURCHASER

The notes A to G appear on subsequent sections of this certificate

This certificate is supported by:
The British Equine Veterinary Association
The Royal College of Veterinary Surgeons
The Veterinary Council of Ireland
Veterinary Ireland

THE HORSE WAS PRESENTED BY:

Name:

At: (Place of examination) Welwyn stud, Pay street, hawkinge, CT18 7DZ

On: (Date & Time) 23/03/2021 09:45

DESCRIPTION OF THE HORSE (See Note A)

NAME of horse (or breeding)

Shelley

BREED or TYPE

Dutch Warmblood

COLOUR

Bay

SEX

Female

AGE by documentation: (See Note B)

4

Dentition consistent with an APPROXIMATE AGE or AGE RANGE of: (See Note B)

4 - 4 Years

Passport Number(s): 528003201700228

Microchip Number: 528210004594289

STAGE OF THE EXAMINATION (See Note C)

Omitted stage(s) 3, 4, 5 of the standard procedure because unbroken horse

ADDITIONAL PROCEDURES (See Note D)

The following specialised diagnostic techniques were undertaken: radiographs

No additional report appended

Flexion tests were performed on the following limbs: ALL FOUR LIMBS

Trotting on a small diameter circle on a firm surface was performed

A blood sample was NOT TAKEN from the horse during the examination (for medication analysis if required). A blood sample was not taken because: failed the vetting

DECLARATION OF PRIOR KNOWLEDGE OF THIS HORSE'S CLINICAL HISTORY (See Note E)

To the best of my knowledge and belief:

- 1) The seller (or the selling agent) IS NOT a client of my veterinary practice
- 2) The horse HAS NOT previously been attended by me or my veterinary practice.
- 3) The horse's veterinary history known to me DOES NOT increase the risk of purchase.

REPORT OF RELEVANT CLINICAL FINDINGS AND/OR HISTORY

- small defect of the lower left eyelid (cosmetic defect)
- small (0.5 cm approx) raised, circular, crusty lesion over left shoulder without alopecia.
- multiple tufts of edema over the topline and shoulders appeared during and after exercise but disappeared when the mare cooled down
- crusts over the dorsal aspects of right hind pattern, of unlikely clinical significance
- sensitivity at palpation of the back, with resistance to latero-lateral flexion
- fetlock valgus in both frontlegs, with mildly straight hocks
- small splint on medial aspect of left fore cannon bone, of no clinical significance
- 205 present (left upper wolf tooth)
- sound under all circumstances, but there is abduction of RH at the trot. This could be her normal movement pattern
- radiographic examination shows flattening of the medial femoral condyle in both hindlegs. This finding is considered to increase the risk of purchase, even if no lameness or effusion is present at the current stage. Presence of a small, rounded bony fragment on the right hind fetlock, above the sesamoid bones. An ultrasound would be needed to identify the parental bone and the exact position of the fragment. Mild remodeling of the navicular bone especially on its flexor border, of no clinical significance at this stage but with potential to evolve.

INSURANCE	Where possible and if required, the prospective purchaser is advised to confirm that they are able to obtain suitable insurance cover before purchasing the horse.
SELLER'S WARRANTY	The prospective purchaser should consider obtaining a warranty from the seller with respect to vices, previous conditions or surgery and other significant information before purchasing the horse. (See note F)

OPINION OF THE EXAMINING VETERINARY SURGEON (See Note G)

In my opinion, on the balance of probabilities, the conditions reported above DO prejudice this horse's suitability for purchase to be used for high level showjumping and reselling in USA.

Veterinary Surgeon's Signature:

Date of Signature: 24/03/2021

Veterinary Surgeon's Name: GIULIA TACCHI

Address: egmont farm,, coppards lane , northiam, TN316QS

NOTES ON THE EXAMINATION

The "British Equine Veterinary Association (BEVA) / Royal College of Veterinary Surgeons (RCVS) Guidance Notes on the Examination of a Horse on Behalf of a Prospective Purchaser (amended 2018)" establishes a general routine for the pre-purchase examination of horses. The examination is conducted broadly in five stages, although the exact sequence of the various tests within the examination may vary. The five stages are:

- Stage 1 Preliminary examination
- Stage 2 Walk and Trot, in hand
- Stage 3 Exercise phase
- Stage 4 Period of rest and re-examination
- Stage 5 Second trot up

In circumstances where it is not possible to complete all the stages, or where the standard 5-stage examination is limited to just stages 1 and 2 at the specific request of the purchaser, the variations from the standard procedure should be made clear on the certificate.

NOTES FOR THE PURCHASER

(A) IDENTIFICATION AND LEGAL OWNERSHIP

This certificate serves to identify the horse that was examined, but it is not the responsibility of the examining veterinary surgeon to ascertain that the declared seller has legal title in the horse. It is the responsibility of the purchaser to satisfy themselves as to the ownership of the horse and to verify the records of any microchip with the relevant database.

(B) AGE

Without appropriate paper records from foalhood it is not possible to confirm the age of a horse with accuracy. Estimates of age based on a dental examination are imprecise and unreliable and any age range shown on the certificate is approximate and based on opinion only. In the absence of documentary evidence, the term 'aged' may be used to refer to a horse considered after examination to be over 15 years of age.

(C) STAGES OF THE EXAMINATION

If any parts of the five stages were omitted for any reason (see "Notes on the Examination" above), the opinion given is based purely upon those parts of the examination that were completed. The incomplete examination will not have identified any clinical signs of disease, injury or abnormality that could only have been revealed a part of the standard procedure that was omitted.

(D) ADDITIONAL PROCEDURES

Any procedures carried out in addition to those recommended in the BEVA/RCVS Guidance Notes (such as radiography, ultrasonography, and endoscopy) are listed. The original records of these procedures (such as radiographs, ultrasonographs, photographs), as well as the blood sample taken for medication analysis, are and remain the property of the examining veterinary surgeon.

Unless specified in additional procedures, this examination does not include examination of the inside of the prepuce (sheath), a detailed mouth examination with a speculum, a height measurement or any examination for pregnancy.

Flexion tests and trotting in a circle on a firm surface are not mandatory parts of the standard procedure, but they can sometimes provide useful additional information about a horse. There may be circumstances when the examining veterinary surgeon concludes that it is unsafe or inappropriate to perform such tests.

(E) THE HORSE'S CLINICAL HISTORY

If the examining veterinary surgeon is aware of any prior veterinary involvement with the horse, the examination will only have been carried out with permission for disclosure of all of the known clinical history. If the clinical history represents a greater than normal risk of the horse developing future problems (i.e. recurrence or delayed consequences of a prior condition), this should be indicated on the certificate along with an explanatory note. (The horse may nevertheless be suitable for purchase based on a risk/benefit analysis). A horse may have received veterinary treatment beyond the awareness of the examining veterinary surgeon.

(F) SELLER'S WARRANTY

The opinion provides no assurances in respect of matters that can only be established by a seller's representations to the purchaser. A seller's warranty is a matter between the seller and the purchaser and is not the responsibility of the examining veterinary surgeon. The purchaser should consider obtaining a written warranty from the seller covering, for example, matters such as medical or surgical history, height, freedom from vices, temperament, non-administration of drugs prior to the examination and the horse's previous or existing uses and performance levels.

(G) THE OPINION

The opinion expressed in this certificate is based solely on the standard procedure of examination recommended by the "BEVA/RCVS Guidance Notes on the Examination of a Horse on Behalf of a Prospective Purchaser (amended 2018)" (as varied by those omitted or additional procedures that are detailed in the certificate). The opinion is subject to the limitations of the examination (see note C above) and provides no assurances in respect of those matters that can only be established by a seller's representations to a purchaser (see note F above).

The horse examined may, at the time of the examination, have been subject to some previously administered drug or medicament having the effect of masking or concealing some disease, injury or physical abnormality that might otherwise have been clinically discoverable.
