

The horse was longed and showed no gait abnormalities and no signs of expiratory sound.

Palpation of the back, cervical region was without any reaction of pain.

22 x rays were taken including the back. There are slightly changes on both naviculars and in the right stifle a small OCD Fragment.
There is a normal risk for the use as a jumping sporthorse.

No signs of infectious diseases could be found.

Best regards

Dr. Marc Cronau
